

MON+SHOT

HA+PRP

Combined action - Significant benefits

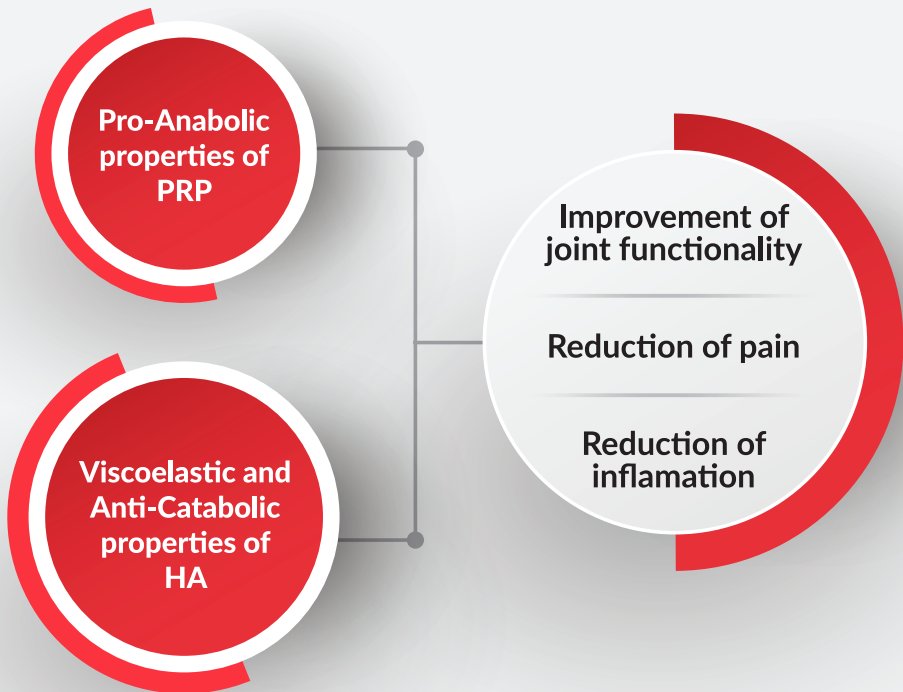

The procedure pack for intra-articular injection
of **Hyaluronic Acid** enriched with **Platelet-Rich Plasma**.

MON+SHOT

HA+PRP

provides the simultaneous anti-catabolic action of
hyaluronic acid and the anabolic action of growth factors
secreted by platelets, which gives significant benefits in the
treatment of Osteoarthritis.

**The combination of above features
will ensure that the addition of PRP
will not affect HA concentration
and will enhance its viscoelastic properties.**

**The use of the MONOSHOT HA + PRP
brings additional benefits
as it shortens the duration of the treatment.**
